Cover image: Cesarina da Silva Martins Ribeiro is a midwife at Marie Stopes Timor-Leste. During the 2020 COVID-19 pandemic, our frontline workers undertook new infection control protocols and increased hygiene measures to stay safe.

Marie Stopes Papua New Guinea conducted a week-long health patrol for a group of small islands in Kavieng, New Ireland Province. With no healthcare provider nearby, women here travel 45 minutes by boat to the nearest main island, and often only do so if their children were sick, or if they were pregnant. Our outreach team provided these communities with contraceptive options such as condoms, IUDs and implants, as well as other medical services.

Message from the CEO and Chair of the Board

2020 was, for much of the world, a year of crisis and challenge unprecedented in recent history. This was certainly the case for MSIA, where we have been reminded of the value adaptability, innovation and community. After the COVID-19 virus swept much of the world, we finished the year with a confronting view of the ongoing consequences of the pandemic on health systems, economies and vulnerable communities where we work.

While our support staff in Australia and overseas have largely been able to work safely from home, our health teams worked very bravely on the frontlines. Sexual and reproductive health needs don't stop during a pandemic and so neither did we.

Once the pandemic hit our region, our programs had to navigate national states of emergency, supply chain breakdowns, new infection prevention protocols, widespread public misinformation, and many other challenges. We supported public health facilities to improve their infection prevention response. Our priority was to ensure our clients could continue to access reproductive healthcare services, wherever possible, while keeping our teams safe too. Our country

programs worked with government health departments to make sure sexual and reproductive health services were recognised as essential services during the pandemic.

Back in April 2020 at the start of the pandemic, MSI estimated that the crisis could result in an 80% reduction in global service delivery, with up to 9.5 million women and girls losing access to our services. Thanks to an adaptive response, committed donors and, above all, the dedication of our front-line service providers, the impact so far has not been so grave. By the end of 2020 our teams had served 12.8 million people - 35,000 every day - with high-quality sexual and reproductive health services.

In 2020, over 250,000 people in the Asia Pacific countries we serve were using a family planning method provided by MSI. 68% of these clients were accessed via outreach, in rural communities who may not have otherwise had access to family planning services.

While our 2020 focus was in many ways captured by the pandemic, we also continued to look to the future. The MSI global partnership released a new strategy under its new name: MSI Reproductive Choices. The bold

Midwives in Papua New Guinea adapted quickly to changing infection control protocols during 2020.

new 2030 strategy: Your Body Your Choice Your Future is committed to the ambitious goal of eliminating the unmet need for contraception and the tragedy of unsafe abortion.

Despite the immense challenges faced by our global organisation, our regional teams and partners, and our health workers, we were inspired by our teams' and our supporters' shared commitment to ensuring that women can continue to have children by choice, not chance. We sincerely thank you for your support.

Chris Turner

*Executive Officer & Regional Director
Marie Stopes International Australia*

Julie Mundy

*Chair of the Board
Marie Stopes International Australia*

Our purpose

At Marie Stopes International Australia, we believe that every woman should be able to determine her future. By providing sexual and reproductive health (SRH) services where they are needed most, we support women and their families to make informed decisions about their reproductive health, including if and when they have children.

Globally, there are still over 218 million women and girls, most of them in vulnerable communities, who currently have no reliable way of preventing an unintended pregnancy. We've seen the transformational potential of family planning, and the positive changes that can happen in a community when women have control over their bodies and futures.

Working across 37 countries, the global MSI Reproductive Choices partnership reaches millions of women, girls and families each year. Over the past year, our programs around the world have provided essential SRH services to 12.8 million clients, despite the extraordinary challenges of the COVID-19 pandemic.

As part of the MSI Reproductive Choices global partnership, Marie Stopes International Australia is working with programs in Timor-Leste, Papua New Guinea and Cambodia

and projects in Viet Nam, Myanmar and Nepal to ensure all women can access contraception – even in a pandemic.

During 2020, it became more important than ever to safeguard access to SRH services, to prevent a backsliding of gains made in access over previous decades. Women and girls have been most impacted by the effects of the pandemic, with the most concerning results being an increase in the numbers of unplanned pregnancies, maternal deaths and violence against women and girls.

It is estimated that a modest 10% decline in contraceptive service usage resulting from COVID-19 disruptions in low and middle-income countries will result in almost 49 million women having an unmet need for contraception, and over 15 million additional unintended pregnancies. Because of the stigmatised nature of family planning services, school closures, restrictions on travel and public transport closures meant that some of our most vulnerable clients were at risk of missing essential sexual and reproductive health care. Our teams worked hard in 2020 to ensure that SRH remained classified as an essential service, allowing our centres and outreach programs to stay open during the national lockdowns.

Across Asia Pacific, COVID-19 is already pushing under-resourced health care systems to breaking point. This more than ever highlights the importance of integrating sexual and reproductive health services, and increasing accessibility to all people, especially the most marginalized and vulnerable.

Accreditation

As a member of the Australian Council for International Development (ACFID), Marie Stopes International Australia is committed to upholding the standards of the ACFID Code of Conduct (The Code). Marie Stopes International Australia adheres to the best-practice principles of The Code and the rigorous governance, financial reporting, management and ethical practices required of it as an international development agency.

Should you have any questions or complaints, please contact feedback@mariestopesinternational.org.au.

Our programs are supported by the Department of Foreign Affairs and Trade.

Australian Government

Department of Foreign Affairs and Trade

In 2020, Marie Stopes Cambodia opened a new clinic in Phnom Penh. The team reached 1,300 youth clients through targeted marketing.

How we deliver our services

Centres

MSI clinics, also known as centres, are a safe and welcoming environment where women and their families can access reproductive health services from experienced clinical service providers.

In 2020 our centres rapidly adapted to new COVID safety guidelines and operating procedures, such as implementing changes to appointment bookings to limit crowding in waiting rooms, increased personal protective equipment requirements and new density limits.

Outreach

Our outreach service providers travel long distances, often through difficult terrain, to reach underserved communities. The importance of our outreach channel was highlighted this year, as movement restrictions and public transport closures meant that many remote or rural communities could not travel to our centres. Often people living in these areas would not otherwise have access to modern contraceptive methods or to skilled healthcare providers. In Papua New Guinea in 2020, 53% of our clients were first time users of family planning.

When our outreach teams couldn't travel due to lockdowns, we made sure our clients weren't forgotten. To make sure our clients could still safely access high quality healthcare, 692 family planning access bags were distributed across Timor-Leste with our support. These included essential items such as contraceptive pills, condoms, soap, sanitary pads, towels and educational materials.

MS Ladies

The MS Ladies model meets the reproductive health needs of women and girls in areas underserved by traditional health care systems. MS Ladies are entrepreneurial women working to provide high-quality family planning services for their own community through door-to-door services in homes or in nearby public health facilities. In 2020, our MS Ladies worked quickly to change their business operations to comply with COVID safety precautions and continue to safely reach clients.

Technical assistance for the public and private sectors

In both PNG and Timor Leste, our teams are working closely with government partners to build their capacity in the provision of sexual and reproductive health services.

Our approach to public sector strengthening involves working through local health systems and providing technical assistance, training and mentoring. We have team members embedded in local health departments and clinics, providing specialist family planning services.

Contact centres

Our Cambodian and Timorese programs each have a contact centre, where trained team members answer client questions and provide referrals for family planning, sexual and reproductive healthcare and other services. During 2020, our contact centres interacted with 26,000 clients via phone calls and online messaging.

Our national youth hotline in Timor-Leste saw a 40% increase in call volume, and a 20% increase in call times. We added a third freecall number in August to expand access and make sure that people could receive safe, quality sexual and reproductive health advice, counselling and referrals during the pandemic.

Global impact

Despite daunting projections at the beginning of the pandemic warning that up to 80% of services could be disrupted, we reached 12.8 million clients, across 34,000 sites, with high-quality sexual and reproductive health services in 2020. Around the world, 32.6 million people are using a method of contraception provided by the MSI global partnership, and across the countries where we work, an average of one in five women who want contraception are using a method provided by us. Every single day, we served 35,000 people with the contraception, safe abortion, and post-abortion care services that enabled them to continue to build the lives they want. One in six clients were adolescents under the age of 20, a group that is still facing significant barriers to access around the world.

¹ We use our innovative socio-demographic mathematical model Impact 2 to estimate the impact of our work, and the wider social and economic benefits of providing access to contraception and safe abortion services. Visit mariestopes.org/impact-2 for more information.

² Couple Years Protection (CYPs) is the global family planning measure that estimates the protection from pregnancy provided by contraceptive methods during a one-year period.

Why I give to MSIA

Helen Parsons on her farm in South Australia.

While I give to charity regularly, I haven't given to Marie Stopes International Australia before. But after remembering their work, I searched on the internet and donated online – an easy process.

MSI's work first touched my heart 30 years ago in Ethiopia, when I worked in Addis Ababa in 1991. I had

a 2-year-old and a 5-year-old and Fanus helped me in the house. She was the breadwinner in her family as her husband had lost his job in the turmoil that was Ethiopia at war with Eritrea and Tigray.

Fanus had a daughter in preschool and was using contraception, but became pregnant. She wished to

access the Marie Stopes clinic and I helped her financially with the fee that was required since she had a job.

I was very impressed by this organisation - still operating in the war-torn country - offering the full suite of family planning services where poverty and traditional beliefs were a barrier. Having a choice gave Fanus and her family a chance of a better life.

Previously, I had worked in Bolivia and Papua New Guinea in the 1980s. I encountered women who were desperate for advice on how to avoid unwanted pregnancies. They asked me; it was hard feeling so powerless to help.

It is exciting to learn more about Marie Stopes International Australia and their work in the Asia Pacific region supporting PNG, Timor-Leste and Cambodia. The MSI global websites have also enabled me to find out about services in Ethiopia nowadays and I'm heartened to know that MSI has had services in Bolivia since 1994.

MSIA has moved to the top of my list of worthwhile charities. If you want your giving to be effective, consider MSIA – I can vouch for it.

MSIA Donor*

Manase's story

Manase is a widower from the Western Highlands Province of Papua New Guinea. He met his late wife Rosa in 1984, and they had six children together. Sadly, in October 2017 Rosa passed away from an unknown illness. When his family urged him to remarry, Manase hesitated. "Maybe one day I will get married again, but I know that I do not want any more children," he said.

The father of six thought family planning was only for women, until he heard about the Non-Scalpel Vasectomy (NSV) method from a Marie Stopes PNG community mobiliser. "I thought it was a big operation, but it was so simple. I was surprised when they told me it was finished," he said.

This was two years ago. Now the Manase volunteers with MSPNG's outreach team, advocating for family planning.

"You know that saying, seeing is believing? It really suits us Papua New Guineans," Manase said. "I stand in front of the men and tell them to look at me. I got a vasectomy. Do I look different from you? I still have my strength. Nothing has changed. And sometimes that's all they need to hear."

Manase says getting the vasectomy was one of the best decisions he has made in his life. "My eldest is now working, the three after him are in college and the last two are in high school. I thank MSPNG for this wonderful service."

"I thought it was a big operation, but it was so simple. I was surprised when they told me it was finished," Manase said of his vasectomy.

Timor-Leste

Timor-Leste has a young and growing population. In 2020, people aged 15-24 years old made up 21% of the population. Across all age groups, the Maternal Mortality Ratio (MMR) more than halved in Timor-Leste between 2010 and 2016, from 557 to 218 deaths per 100,000 live births. However, access to family planning information and services for young people – a key step to further reducing the national MMR – have not kept pace with this demographic growth. Timorese girls aged 15-19 are twice as likely to die from pregnancy related complications as those aged 20-24. 73% of sexually active adolescents in Timor-Leste have an unmet need for contraception, and 48% have no knowledge of any long-acting contraceptive method (such as an implant or IUD).

Marie Stopes Timor-Leste has focussed its efforts on addressing this information gap, especially for youth. Our outreach teams have moved to a strategy of advance demand generation. Under this approach, a specialist educator travels to communities to run small-group activities introducing participants to family planning, and dispelling myths or misconceptions. The educator runs these activities a week before Marie Stopes Timor-Leste service delivery teams arrive, giving participants time to reflect on the contraceptive methods available, and to choose which may be right for them. At Marie Stopes Timor-

Leste's reproductive Health Centre in Dili, particularly successful events include the 'Youth Corner' and 'Parent Corner', with content tailored to the needs and concerns of each respective demographic group.

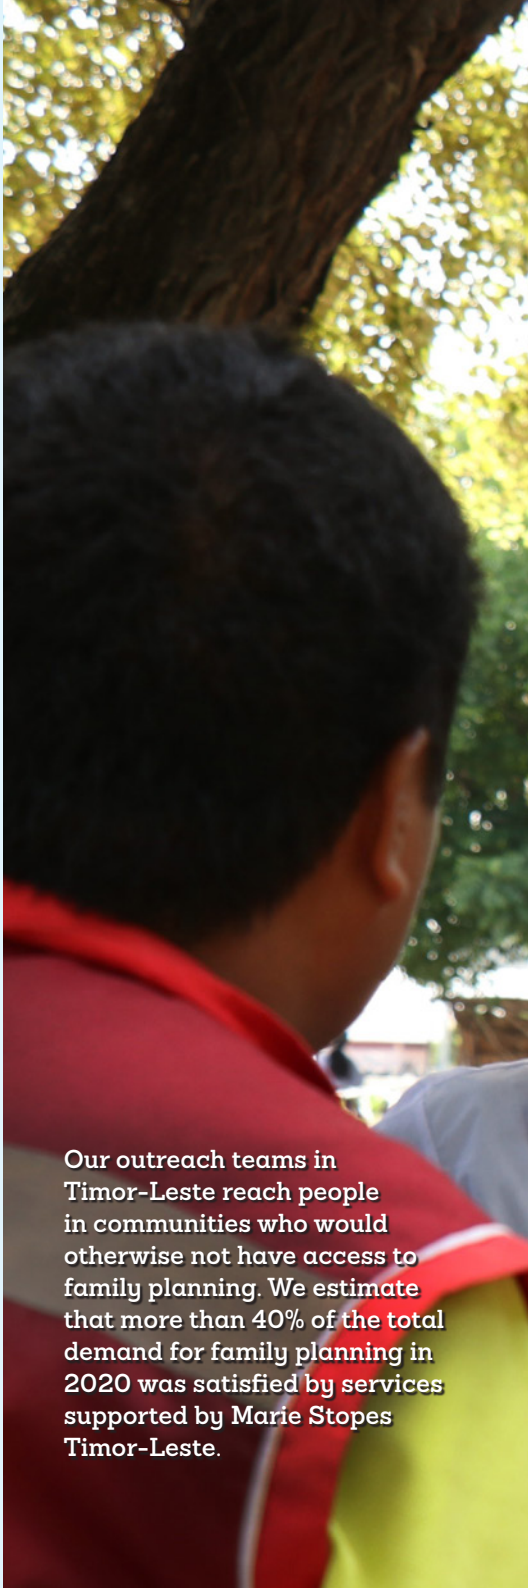

In 2020, Marie Stopes Timor-Leste was meeting over 40% of the total demand for family planning services across the country, with 51,000 people using a modern family planning method provided by Marie Stopes Timor-Leste. 5% of clients were under 20 years old, and 20% of clients were aged between 20 to 24. The Marie Stopes Timor-Leste youth hotline, celebrating its ninth year of operations in 2020, continues to act as a key information source for young people, with 64% of callers under 25 years old.

Fast facts

In 2020, approximately 51,000 people in Timor-Leste were using a modern method of contraception supplied by Marie Stopes Timor-Leste.

In 2020, MSTL prevented an estimated:

- 10 maternal deaths
- 24,000 unintended pregnancies
- 5,700 unsafe abortions

A young person with dark hair, wearing a red shirt, is seen from the back/side, looking out towards a large tree with green leaves. The background is slightly blurred, showing more of the tree and some distant structures.

Our outreach teams in Timor-Leste reach people in communities who would otherwise not have access to family planning. We estimate that more than 40% of the total demand for family planning in 2020 was satisfied by services supported by Marie Stopes Timor-Leste.

Cambodia

In 2020, Marie Stopes Cambodia expanded its service provision by opening a new centre in Phnom Penh. The Sen Sok clinic opened in November, offering a full range of sexual and reproductive health care services including safe abortion. The centre served 116 clients in its first two months of operation. Across the eight centres and 153 MS Ladies, Marie Stopes Cambodia provided 62,000 family planning and safe abortion services, averting an estimated 10,000 unsafe abortions and 23,000 unintended pregnancies.

Marie Stopes Cambodia began its annual Power of Choice campaign in 2018, aiming to empower women with information to make informed choices about their sexual and reproductive health. In October 2020, the campaign moved fully online for the first time, focussed around a mini-series of three online videos. The dramatization follows the life of a woman who has an unplanned pregnancy as she begins her new job. Using the Romdoul, Cambodia's national flower, the film focuses on choices and how they affect people's lives. There was very high engagement with the campaign, with over 428,000 views in one month, and many positive comments through social media channels.

After nearly four years in the role, Amy Williamson decided to step down as Country Director in October 2020. Since January 2017, she has ably led Marie Stopes Cambodia, consolidating the

programme into two well-managed service channels (centres and MS Ladies), and building a strong and stable management team around her. She leaves the program in a well-funded position to continue to provide high-impact services and on track to operate as a fully commercial entity.

Marie Stopes Cambodia's new Country Director, Ella Nwaokolo, began in October 2020. Ella's experience and focus on expanding access to safe abortion and post-abortion care services globally, and improving the sustainability of centre networks led to a very smooth transition over the last quarter of 2020. Marie Stopes Cambodia delivered its highest number of CYPs (couple years of protection) in the last quarter of 2020 since 2018.

Fast facts

In 2020, approximately 68,000 people in Cambodia were using a modern method of contraception supplied by Marie Stopes Cambodia.

In 2020, Marie Stopes Cambodia prevented an estimated:

- 20 maternal deaths
- 23,000 unintended pregnancies
- 10,000 unsafe abortions

Empower

The Mekong Women's Empowerment Program (Empower), funded by the Australian Government, aims to advance women's economic empowerment by increasing the clinical capacity, business skills and financial independence of entrepreneurial health providers in Cambodia, Vietnam and Myanmar.

A network of 425 Marie Stopes Ladies across the three countries have reached over 650,000 community members with SRH/FP information and have delivered SRH/FP services and products to over 190,000 clients.

Following business training in Cambodia, Marie Stopes Lady Mao Thida said, "My business revenue increased by 20 per cent because I improved my skills in attracting new customers and adding new services into my business."

Papua New Guinea

Last year was one of restructuring and consolidation for Marie Stopes Papua New Guinea. Despite a significant reduction in personnel at the start of the year due to a funding reduction, the team continued to provide high quality sexual and reproductive health care services in 14 provinces across PNG. Marie Stopes Papua New Guinea provided 101,000 couple years of protection, averting an estimated 62,000 future unintended pregnancies.

Papua New Guinea's mountainous geography presents a significant challenge to service delivery. Eight of Marie Stopes Papua New Guinea's nine outreach teams travel by boat or plane to reach remote communities that are inaccessible by road. For the teams themselves, the terrain means long stretches of time where they are unable to restock with supplies and have to work without support from the regional coordination teams.

In 2020, Marie Stopes Papua New Guinea harnessed the benefits of digital technology to address these challenges, investing in audio recording equipment in the Port Moresby office. The Clinical Services and Management teams have begun to record regular podcasts for staff members,

quickly disseminating clinical quality and performance updates to staff across the country. Marie Stopes Papua New Guinea have also begun scripting informational segments for provincial radio stations, addressing local myths and misconceptions about family planning.

PNG's maternal mortality rate remains the highest in the Western Pacific region, driven in part by high levels of unmet need for contraception across the country. Unmet need is especially high (65%) amongst sexually active unmarried women. Throughout 2020, Marie Stopes Papua New Guinea has conducted targeted marketing and information campaigns to reach women under 20 years old – the age group least likely to have their demand for contraception satisfied. The MSPNG Facebook page reached 25,000 followers, engaging a predominantly adolescent audience with case studies, information and advice on safe sex, contraception, and family planning. The increased engagement on social media also led to an increase in young people accessing services at Marie Stopes Papua New Guinea – over 10% of clients visiting Marie Stopes Papua New Guinea's services were under 20 years old.

A healthcare worker, seen from the back and side, is holding out two blister packs of white contraceptive pills. They are addressing a group of people, including women and children, who are sitting on the ground in a rural, outdoor setting. The people are looking towards the healthcare worker with varying degrees of interest and attention. The background shows some greenery and a simple structure.

A Marie Stopes Papua New Guinea outreach healthcare worker explains contraceptive options to a rural audience. In 2020, our outreach teams reached 22,000 clients across Papua New Guinea.

Fast facts

In 2020, approximately 134,000 people in Papua New Guinea were using a modern method of contraception supplied by Marie Stopes Papua New Guinea.

In 2020, Marie Stopes Papua New Guinea prevented an estimated:

- 80 maternal deaths
- 62,000 unintended pregnancies
- 6,800 unsafe abortions.

Fast finance

Marie Stopes International Australia (MSIA) is part of the global MSI Reproductive Choices partnership. The partnership generates over \$545 million AUD in revenue globally. This income is primarily composed of grants from institutional donors and private foundations together with revenue generated from the partnership's commercial operations.

In 2020, MSIA recorded total expenditure of \$9.1m, of which 85% (\$7.7m) was international programs expenditure. MSIA continues to maintain low support office costs with administration costs accounting for 10% of total expenditure and fundraising costs accounting for 4% of total expenditure.

Total revenue of \$9.6m was recognised in 2020, a decrease of 61% (\$14.8m) from the 2019 financial

year which was inflated by a one-off \$12m donation. The breakdown of revenue returned to a more familiar look in 2020 with DFAT grants accounting for 74% of total revenue and public donations accounting for 13% of total revenue. MSIA will focus on renewing current institutional funding contracts in 2021 whilst continuing to diversify our donor portfolio and build upon a solid public fundraising result in 2020.

MSIA have generated a surplus for the 2020 financial year of \$511k. This is an impressive result given the numerous COVID-19 related operational and funding challenges encountered throughout 2020. MSIA have increased their total equity position to \$15.2m, of which \$10m is already committed to supporting international programs in future years and is set aside in the designated

funds reserves. MSIA are likely to incur annual deficits in the coming years having already recorded the donation revenue for the designated funds reserves which will be expensed as incurred in future years. The Board and management at MSIA will continue to closely monitor the organisation's financial situation, ensuring both a healthy bottom line while maximising our contribution to the global mission.

The below revenue and expenditure graphs represent our various components of income and expenditure as a proportion of the totals. Each category is adapted from the summary financial statements on the following page and is based on the definitions described in the ACFID Code of Conduct. The 'dollars managed in the region' pie chart represents expenditure for each of the Country Programs within the Pacific Asia region, supported by MSIA.

Report of the Independent Auditor on the Summary Financial Statements to the members of Marie Stopes International Australia

Opinion

The summary financial statements, which comprise the summary balance sheet as at 31 December 2020 and the summary income statement and the summary statement of changes in equity for the year then ended, are derived from the audited financial report of Marie Stopes International Australia for the year ended 31 December 2020.

In our opinion, the accompanying summary financial statements are consistent, in all material respects, with the audited financial report in accordance with the basis described in the summary financial statements.

Summary Financial Statements

The summary financial statements do not contain a summary statement of cash flows or all the disclosures required by the Australian Accounting Standards. Reading the summary financial statements and the auditor's report thereon, therefore, is not a substitute for reading the audited financial report and the auditor's report thereon. The summary financial statements and the audited

financial report do not reflect the effects of events that occurred subsequent to the date of our report on the audited financial report.

The Audited Financial Report and Our Report Thereon

We expressed an unmodified audit opinion on the audited financial report in our report dated 29 March 2021.

Responsibilities of the Directors for the Summary Financial Statements

The Directors are responsible for the preparation of the summary financial statements that gives a true and fair view in accordance with Australian Accounting Standards and for such internal control as the Directors determine is necessary to enable the preparation of the financial report that gives a true and fair view and is free from material misstatement, whether due to fraud or error.

Auditor's Responsibility

Our responsibility is to express an opinion on whether the summary financial statements are consistent, in all material respects, with the audited financial report based on our procedures, which were conducted in accordance with Auditing Standard ASA 810 *Engagements to Report on Summary Financial Statements*.

Environmental Statement

Marie Stopes International Australia is committed to reducing its environmental impact and has produced this annual report with consideration for the environment. The paper used in this report is manufactured using ECF and FSC Mixed Sources certified pulp from well-managed forests under ISO 14001 standards.

In 2020 we have reduced the number of reports we print. We encourage our audience to view the digital version of our annual report at our website.
